INSTALLATION

Material description:

NORNA ARC post dimension 180/200 mm and 140/160 mm.
Countersunk and plugged bolt holes.

1
Stainless steel pipe's Ø 60 mm (AISI 304-A2)
Stainless steel post support with integrated
"climbing bar". Built -in post anchor / post
support.

2
Integrated "Step Stool" in the steel
structures, which children can use either
as an entry or exit point on the playground
equipment or simply as a resting point. The
"Step Stool" is newly developed and made
from non-slip rubber.

3
The climbing nets in the NORNA ARC series
all have integrated yellow vertical elements
that provide a natural entry point onto the
playground equipment. These elements
also emphasize the incline of the playground
equipment structure and emphasize
the abstract and dynamic design, which
appeals to children's imaginations.

The vision behind the NORNA ARC series is playground equipment that:

- Is simple and elegant in design
- Can be installed onto the ground
- Is designed in every detail, aimed at entraining and challenging children of varying ages

TÜV (Süd Product Service) testing and certification of playground equipment in accordance with (European standard) EN 1176. A TÜV certificate is your assurance that the playground equipment is made in accordance with applicable standards.

You will find the SMART ROBINIA® brand next to the equipment made using NORNA PLAYGROUNDS' unique pre-drilled system. This brand is your guarantee for a high level of safety and easy installation.

We have created the NORNA 100 symbol so that it is easy to find playground equipment where the fall height does not exceed 1 metre. The advantage with these products is that you typically do not need any protective surfaces other than well-established grass.

NORNA PLAYGROUND only uses FSC®-marked wood for its production of our playground equipment. FSC® (Forest Stewardship Council®) is an international marking scheme. NORNA PLAYGROUNDS is also FSC®-certified as a factory.
